

Clean water

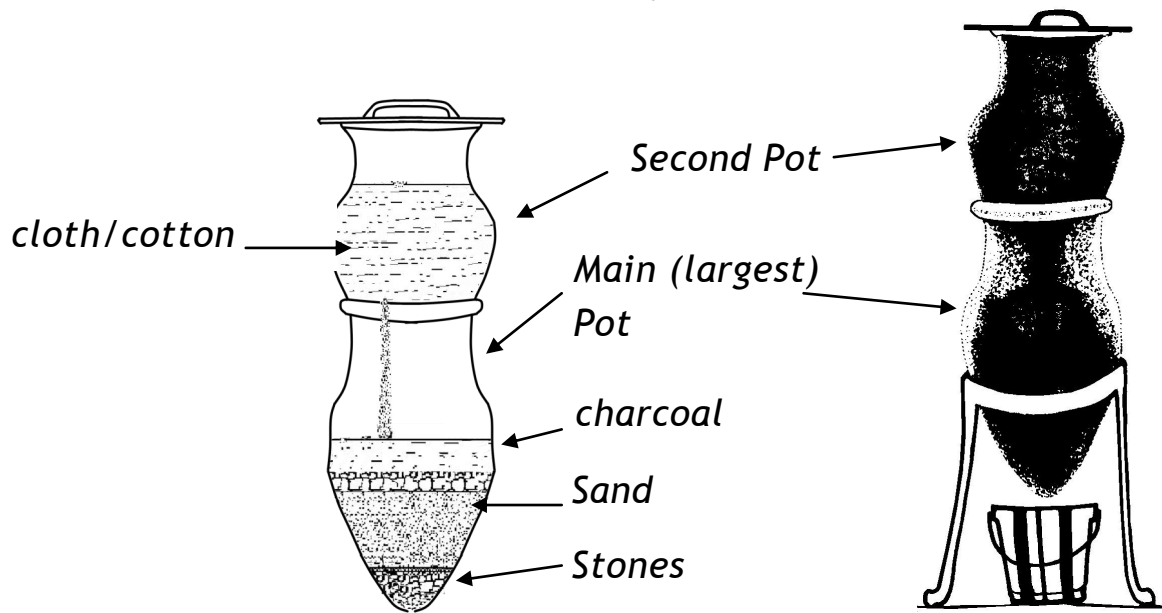

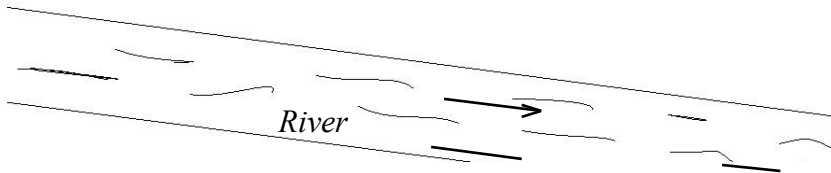

Filtration

You can dig a well 6 feet from a sandy river.

Make sure all the village toilets are downstream from the well, and at least 50 yards away from it.

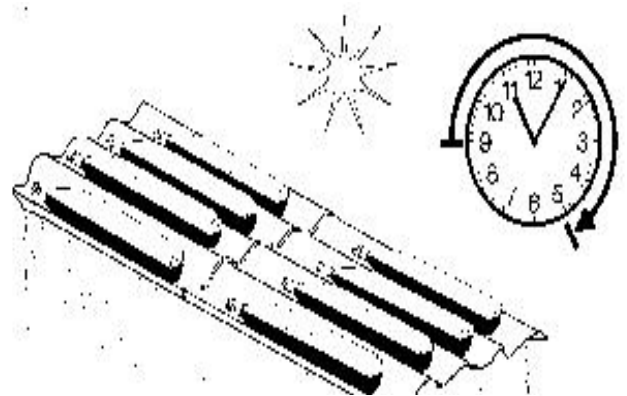

1. Soak off the labels.

2. Paint half of each bottle black.

3. Fill the bottles three quarters full with water, shake them for 20 seconds and put the tops on tightly.

4. Lay the bottles in the sun, black side down; clear sides towards the sun. Leave them for eight hours or more.
